

Annual emissions, initialized at the year 2020, in units of GtC.

The three solid lines correspond to trajectories of annual expected emissions under three model misspecification scenarios: neutrality, less aversion and more aversion from Barnett, Brock, Hansen and Zhang (2023).

The four dashed lines correspond to trajectories of emissions under four projected RCP scenarios: RCP 2.6, RCP 4.5, RCP6.0 and RCP 8.5 from the 2017 Climate Science Special Report by the U.S. Global Change Research Program
